

6 models · live fold simulation

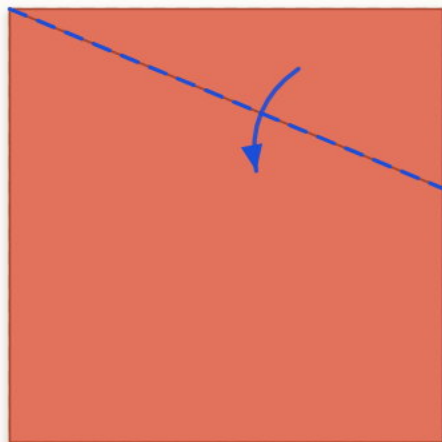

Learn to fold paper, one crease at a time

Every diagram here is generated by folding a real simulated sheet, so the paper preview, the crease pattern and the printable tutorial always agree. Play the animation, scrub through a single fold, or export the whole sequence.

Fold guide

1 Fold the top edge to the diagonal

Valley

Place the square with a corner facing you. Bring the top edge down so it lies exactly along the corner-to-corner diagonal.

Tip: Line up the edge first, then press the crease from the centre outwards.

2 Mirror the fold on the other side

Valley

Repeat with the left edge so both edges meet along the diagonal. You now have a kite base.

3 Blunt the wide corner

Valley

Fold the wide corner of the kite back on itself to shape the fox's muzzle.
