Heat-starved ...

Upper Geyser Basin, Yellowstone — Textbook cone geyser — highly periodic, ~40 m column.

Automatic mode drives the parameters from the selected preset and adds slow natural variability, so intervals wander the way a real geyser's do. Switch to Manual to take over the sliders and triggers.

THERMAL

Geothermal heat flux

1.00 × 8 MW

Net input now 8.0 MW after conductive loss

GEOLOGY

Conduit depth

22.0 m

Hydrostatic load raises the boiling point to 132 °C

Bore diameter

0.34 m

Plumbing volume 7,591 L

Silica throat constriction

45%

Seal index 62% — sets nucleation delay and jet focus

HYDROLOGY & ATMOSPHERE

Groundwater recharge

26.0 L/s
